Analysis in one variable, fall 2020

Programme December 7–December 11

Due to new recommendations related to Covid-19, all teaching this week is online only. The Zoom link is available on the Canvas course webpage.

Relevant information for this week:

- **No Group-wise presentations during revision weeks.**
- **Homework.** Homework 6 to be submitted on Friday this week.
- **Mentor meeting.** I would suggest that you use this time to prepare your homework, or discuss the previous exams scheduled for the seminars. While your mentor will be present at this meeting, you should also consider to meet without your mentor, to discuss previous exams, and other problems.
- For each one of the previous exams mentioned below, the allowed writing time was set to five hours. Use this as a guideline for how much you should prepare.

**Tuesday 8/12:**

- My ambition for the lecture is to summarize the main ideas of the course, how they are related, and hopefully also some typical uses for the written exam.

**Wednesday 9/12:**

- **Preparation for the seminar:** Try to solve the previous exams from 2019-01-19 and 2018-08-20. You should skip problems 1 and 6a on both.

**Friday 11/12:**

- **Preparation for the seminar:** Try to solve the previous exams from 2019-01-08 and 2018-05-23. You should skip problems 1 and 6a on both.
- My ambition for the lecture is to discuss problem solving. This may involve left overs from the seminars, other problems from previous exams, or other problems relevant to the course. A Mentimeter will be available.
